

THE LIGHT AT THE END OF THE TUNNEL HAS TO BE PLUGGED IN.

DESCRIPTION

The PEP Station allows drivers of electric vehicles to access electricity via an access card or credit card. After a vehicle connects to the PEP Station's 110V or 220V power supply, the sunlight-readable LCD touch screen prompts the user to accept the price per hour of connectivity, choose a charge time and swipe a credit card for authorization. If the station is configured to allow access cards, no form of payment is necessary. When the vehicle's battery has been fully charged, or the time selected elapses, the station automatically discontinues the electricity. If the user wishes to discontinue the charge prior to the selected time expiring, they simply disconnect the power cord. The entire process is as easy as traditional methods of fueling vehicles, but done in a clean, eco-conscious manner.

110V CHARGING: LEVEL 1 CHARGING

- Charging connection for two vehicles – SAE J1772 standard compliant
- AC charging power: 1.5kw (12Amp, 120V)
- Voltage rating: 120V
- Current rating: 12 Amps
- Recommended service breaker: 20 Amps on dedicated circuit
- GFCI provided: Yes
- Safety: GFCI per UL, UL/CE compliant, NEC Article 625 compliant
- Sunlight readable 8.4" diagonal touchscreen LCD
- Access card/credit card reader
- Coil cord, 15 foot maximum extension length
- 9"x9"x24½" component housing on 12"x12"x25" reinforced concrete base, overall height of 49 ½"

220V CHARGING: LEVEL 2 CHARGING

- Charging connection for two vehicles – SAE J1772 standard compliant
- AC charging power: 7.2kw (30Amp, 240V)
- Voltage rating: 240V/208V
- Current rating: 30 Amps
- Recommended service breaker: 40 Amps on dedicated circuit
- GFCI provided: Yes
- Safety: GFCI per UL, UL/CE compliant, NEC Article 625 compliant
- Sunlight readable 8.4" diagonal touchscreen LCD
- Access card/credit card reader
- Coil cord, 15 foot maximum extension length
- 9"x9"x24½" component housing on 12"x12"x25" reinforced concrete base, overall height of 49 ½"
